## What is this product?

This fund is a sub-fund of Amundi Funds, a mutual fund domiciled in Luxembourg and its home regulator is the Commission de Surveillance du Secteur Financier.

This fund is a standard variable net asset value money market fund under European Money Market Fund Regulation (EU) 2017/1131.

## Objectives and Investment Strategy

To offer returns in line with money markets rates.

The fund invests in short-term assets and, more precisely, mainly in money market instruments that are denominated in US dollar or hedged against US dollar. Specifically, the fund invests at least 67% of its assets in money market instruments (including asset-backed commercial papers).

The average portfolio maturity maintained by the fund will not exceed 90 days and the fund will not purchase an instrument with a remaining maturity of more than 397 days, or two years in the case of government and other public securities.

The fund may invest up to 10% of its assets in units / shares of other UCITS (undertaking for collective investment

in transferable securities) / UCI (undertaking for collective investment) qualifying and authorized as a money market fund in accordance with the Money Market Fund Regulation (Regulation (EU) 2017/1131) (as amended and supplemented from time to time).

The fund may invest in debt instruments with loss-absorption features ("LAP"), for example, contingent convertible debt securities, senior non-preferred debts, etc. These instruments may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger event(s). The fund's expected total maximum investments in LAP will be less than 30% of its net asset value.

The fund is actively managed and seeks to achieve a stable performance in line with the Compounded Effective Federal Funds Rate Index (formerly the "USD Libor 3-month rate" until 1 March 2021) (the "Benchmark"). The fund may use the Benchmark a posteriori (i.e. as an indicator for assessing the fund's performance). There are no constraints relative to the Benchmark restraining portfolio construction. The Benchmark is not used for the purpose of portfolio construction of the fund and the investment exposures, performance and returns of the fund may differ significantly from the Benchmark.

Please refer to the Prospectus for details of the Benchmark.

The investment team uses both technical and fundamental analysis, including credit analysis, to select issuers and short term private securities (bottom-up) while constructing a high quality portfolio with a strong focus on liquidity and risk management.

### **Use of derivatives / investment in derivatives**

This fund's net derivative exposure may be up to 50% of the fund's net asset value.

### **What are the key risks?**

**Investment involves risks. Please refer to the Prospectus for details including the risk factors.**

**1. Not a deposit:** The purchase of a share in the fund is not the same as placing funds on deposit with a bank or deposit taking company. The management company has no obligation to redeem shares at the offer value and the fund is not subject to the supervision of the Hong Kong Monetary Authority. The fund's investment portfolio may fall in value and therefore your investment in the fund may suffer loss.

**2. Credit risk:** The issuer of money market instrument held by the fund may default on its obligation and the fund will not recover its investment. Also the fund may not get the interest payment that it is entitled to.

**3. Interest rate risk:** The Net Asset Value of the fund will be affected depending on fluctuations in interest rates. When interest rates decline, indeed, the market value of fixed-income securities tends to increase, and conversely. A rise in interest rates would have for consequences a depreciation of the fund's investments.

**4. Exchange rate risk:** The fund may be invested, according to variable proportions and limits, in values and instruments expressed in other currencies than the base currency of the fund and, consequently, may lead to be exposed to a variation of the exchange rates.

**5. Risks attached to transactions into currency swap:** Use of the derivatives instruments might be unsuccessful and incur losses for the fund due to market conditions. Derivatives also involve additional specific risks such as the risk of mispricing or improper valuation and the risk that derivatives may not correlate perfectly with underlying assets, interest rates and indices.

**6. Risk attached to the use of Financial Derivative Instruments ("FDI"):** The fund may invest in FDI for hedging purpose only. Investment in FDI is subject to additional risks, including credit risk of the issuer, liquidity risk, counterparty risk and valuation risk. In adverse situation, the fund's use of FDI may become ineffective in hedging and the fund may suffer significant losses.

**7. Downgrading risk:** The credit rating of debt securities or their issuers may be subject to the risk of being downgraded. In the event of downgrading in the credit ratings of a security or an issuer relating to a security, the fund's investment value in such security and, in turn, the value of the fund may be adversely affected. The Investment Manager may or may not dispose of the debt securities that are being downgraded, subject to the investment objective of the fund and if it is in the interests of the Shareholders to do so. Moreover, the Investment Manager may or may not be able to dispose of the debt securities that are being downgraded.

**8. European Sovereign-debt Crisis Risk:** The fund may be exposed to risks relating to investment in securities of issuers located or incorporated in European markets. Given that the economic and financial difficulties in Europe may continue to get worse or spread within and outside Europe, and the possibility of the failure of the measures taken by the European governments, central banks and other authorities, such as austerity measures and reforms, European markets may be subject to additional market volatility, liquidity, price and currency risks. Risk relating to potential default of some members of the Eurozone combined with a potential exit of some countries of the Eurozone or even the termination of the Eurozone, may result in

increased currency risk and credit risk on issuers from those countries and the future stability and growth of those countries may be negatively affected. The value and performance of the fund may be significantly and adversely affected due to escalation of the European crisis.

**9. Risks related to distribution out of capital:** For distribution class, Amundi Funds may at its discretion determine to pay dividends out of income or capital of the fund. In addition, Amundi Funds may at its discretion pay dividends out of gross income while charging / paying all or part of the fund's fees and expenses to the capital of the fund, resulting in an increase in distributable income for the payment of dividends by the fund, in which case, the fund is effectively paying dividends out of capital. Payment of dividends out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends out of the fund's capital or payment of dividends effectively out of the fund's capital (as the case may be) may result in an immediate reduction of the net asset value per share of the fund. Amundi Funds may change the fund's dividend distribution policy to pay dividends out of capital or effectively out of capital of the fund subject to the SFC's prior approval. For change of distribution policy, not less than one month's prior notice will be provided to affected Shareholders.

**10. In Hong Kong, the fund is not authorised as a money market fund under the SFC's Code on Unit Trusts and Mutual Funds for offering to the public.** The weighted average maturity ("WAM") ( $\leq 90$  days) and weighted average life ("WAL") ( $\leq 12$  months) of the fund's portfolio, are different from money market funds that are authorised under Chapter 8.2 of the SFC's Code on Unit Trusts and Mutual Funds which requires  $WAM \leq 60$  days and  $WAL \leq 120$  days. Therefore, investors are reminded that the fund in general may be subject to higher credit risks and interest rate risks as compared to money market funds that are authorised under Chapter 8.2 of the SFC's Code on Unit Trusts and Mutual Funds. Accordingly, investors should refer to the section titled "**General investment risk**" in the Prospectus of the fund and this section for the risks relating to the fund.
