What is this product?

This fund is constituted in the form of a mutual fund corporation. It is domiciled in Dublin, Ireland and its home regulator is the Central Bank of Ireland ("CBI").

Objectives and Investment Strategy

The investment objective of the Fund is to maximize total return from high current income and long-term capital appreciation by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities under varying market environments with a focus on downside protection.

The Fund will invest primarily in debt securities issued by US corporations or by the US government and its agencies. Such securities will be listed, dealt or traded on recognised markets and may be rated investment grade or below investment grade or non-rated by recognised rating agencies.

The Fund may also invest in debt securities issued by non-US governments and their agencies and corporations located globally, including investing in debt securities issued by companies located in, and government and government agencies of, Emerging Market Countries (as defined in the Prospectus) up to one third of its net asset value.

The Fund may invest up to 10% of its net assets in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.

The Fund may also invest in money market instruments including bank deposits, fixed or floating rate instruments, floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, participation interests in loans (which are securitised and freely transferable), cash and cash equivalents (including treasury bills) that are rated as investment grade by recognised rating agencies.

The Fund will not invest more than 10% of its net asset value in underlying funds (including exchange traded funds (ETFs) which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Underlying funds in which the Fund invests may be leveraged. Currently, the Fund does not invest in any underlying fund which is leveraged.

The Fund may use financial derivative instruments (FDI) for hedging purposes. The Fund may also use FDIs (including futures, swaps, forwards and options) extensively for investment and/or efficient portfolio management purposes. For clarification, the maximum proportion of the Fund's net asset value that can be subject to total return swaps is 20%. The expected proportion of the Fund's net asset value that will be subject to total return swaps is 5%. The expected proportion is not a limit and the actual percentage may vary over time depending on factors including, but not limited to, market conditions.

PRODUCT KEY FACTS

NEUBERGER	BERMAN
-----------	--------

No specific strategy relating to FDI is adopted by the Fund, however the Fund may use FDIs to achieve a profit or to hedge existing long positions, hedge against market risk or gain exposure to an underlying market and/or to hedge or gain exposure to an increase in the value of securities or currencies.

The Fund may opportunistically invest up to 10% of its net asset value in participation interests in floating or adjustable rate senior secured loans, which are securitised and freely transferable, and which meet the regulatory criteria to be considered money market instruments.

Under normal market conditions, the Fund's average interest rate duration will be within a range of 2 to 8 years.

The Fund may invest less than 30% of its net asset value in instruments with loss-absorption features (such as contingent convertible bonds and bail in bonds).

The Fund may utilise repurchase agreements and reverse repurchase agreements ("Repo Contracts") in aggregate for up to 10% of its net asset value. For clarification, the expected proportion of the Fund's net asset value that will be subject to Repo Contracts is 3%. The expected proportion is not a limit and the actual percentage may vary over time depending on factors including, but not limited to, market conditions.

The Fund is actively managed and does not intend to track the benchmark and is not constrained by it. The benchmark is included in this document for performance comparison purposes only. The Fund gives some consideration to the benchmark constituents in the selection of securities and may not hold all or many of the benchmark's components.

Use of financial derivative instruments / investment in financial derivative instruments

The Fund's net derivative exposure may be up to 50% of the Fund's net asset value.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

Investment Risk

The Fund is an investment fund. The Fund's investment portfolio may fall in value and therefore your investment in the Fund may suffer losses.

Fixed Income Securities and Downgrade Risk

Fixed income securities are subject to the risk of an issuer's ability to meet principal and interest payments on the obligation (credit risk), and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). The Fund may invest in fixed-income securities which are interest rate sensitive. An increase in interest rates will generally reduce the value of fixed-income securities, while a decline in interest rates will generally increase the value of fixed-income securities. The performance of the Fund will therefore depend in part on the ability to anticipate and respond to such fluctuations on market interest rates, and to utilise appropriate strategies to maximise returns, while attempting to minimise the associated risks to investment capital. Fixed income securities are also exposed to the risk of being downgraded, which can cause a significant drop in the value of the Fund. The Manager or the Sub-Investment Managers may or may not be able to dispose of the debt instruments that are being downgraded.

Lower Rated Securities Risk

The Fund may invest in lower rated (i.e. non-investment grade or high yield) or unrated debt securities. Such securities are more likely to react to developments affecting market and credit risk than are more highly rated debt securities, which primarily react to movements in the general level of interest rates. Investors should carefully consider the relative risks of investing in high yield debt securities and understand that such securities generally are not meant for short-term investing.

The risk of loss due to default by these issuers is significantly greater because lower rated and unrated debt securities of comparable quality generally are unsecured and frequently are subordinated to the prior payment of senior indebtedness. Such securities are generally subject to lower liquidity, higher volatility and greater risk of loss of principal and interest than high-rated debt securities. The Fund may therefore find it more difficult to sell such high yield debt securities or may be able to sell these securities only at prices lower than if such securities were widely traded. Furthermore, the Fund may experience difficulty in valuing certain securities at certain times.

Sovereign Debt Risk

The Fund may invest in government/sovereign fixed income securities. The Fund will be exposed to direct or indirect consequences of political, social and economic changes in various countries by investing in sovereign debts. These factors may affect a particular government's willingness to make timely payments for its debt obligations. Investment in sovereign debts issued or guaranteed by governments may involve a high degree of risk, as default can occur if the government or sovereign entity is not able or willing to repay the principal and/or interest when due and the Fund may suffer significant losses as a result.

Credit Risk

The Fund may invest in corporate fixed income securities. The risk that corporate issuers of fixed income securities may fail to meet their interest repayments, or repay debt, which may result the Fund suffering temporary or permanent losses. This risk is greater for investments with a lower credit rating.

Risks associated with Collateralised and/or Securitised Products

The Fund may invest in collateralised and/or securitised products, which may be less liquid than other debt securities, prone to substantial price volatility, and subject to greater credit, liquidity and interest rate risk compared to other debt securities. They are often exposed to extension and prepayment risks and risks that the payment obligations relating to the underlying assets are not met, which may adversely impact the return of the securities.

Emerging Markets Risk

The Fund may invest up to one third of its net asset value in emerging market debt securities. Investing in emerging markets may involve heightened risks (some of which could be significant) and special considerations not typically associated with investing in other more established economies or securities markets. Such risks may include, but are not limited to: (a) greater social, economic and political uncertainty including war; (b) higher dependence on exports and the corresponding importance of international trade; (c) greater risk of inflation; (d) increased likelihood of governmental involvement in and control over the economies; (e) governmental decisions to cease support of economic reform programs or to impose centrally planned economies; (f) certain considerations regarding the maintenance of the Fund's securities and cash with non-U.S. brokers and securities depositories; (g) lower standard of corporate governance; (h) currency risks/control.

These factors may adversely affect the level and volatility of securities' prices and the liquidity of the Fund's investments. Volatility or illiquidity could impair the Fund's profitability or result in losses. Separately, bid and offer spreads of the price of securities may be significant and accordingly, the Fund may incur significant trading costs.

With respect to certain countries, there is the possibility of nationalisation, expropriation, confiscatory taxation, imposition of withholding or other taxes on dividends, interest, capital gains or other income, limitations on the removal of funds or other assets of a Fund, political changes, government regulation, social instability or diplomatic developments (including war), any of which could affect adversely the economies of such countries or the value of the Fund's investments in those countries.

Currency Risk

The base currency value of the investment of the Fund designated in another currency may rise and fall due to exchange rate fluctuations in respect of the relevant currencies. Adverse movements in currency exchange rates can result in a decrease in return of and a loss of capital.

The assets of Fund may generally be invested in non-US Dollar denominated securities and any income or capital received by the Fund from these investments may be denominated in the local currency of Investment, whereas the Fund will be denominated in US Dollars. Accordingly, changes in currency exchange rates (to the extent only partially or fully unhedged) between the currency of the relevant emerging market and the currency in which a Class of Shares is denominated may affect the value of the Shares. As the currency exchange rates of Emerging Market Countries tend to be more volatile than those of more developed economies, the effect of changes in exchange rates on the value of the Fund may be more pronounced than it would be for the Fund if it were investing in more developed markets.

Currency Hedging Risk

While potentially reducing the currency risks to which the Fund would otherwise be exposed, currency hedging instruments may involve the risk of a default by a counterparty (counterparty risk).

Risks relating to the use of FDI

Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. The leverage element/component of an FDI can result in a loss significantly greater than the amount invested in the FDI by the Fund. Exposure to FDI may lead to a high risk of significant loss by the Fund.

FDI may be used for hedging purposes. Hedging is a technique used to seek to minimise an exposure created from an underlying position by counteracting such exposure by means of acquiring an offsetting position. The use of hedging techniques may limit the potential upside of the Fund. There is no guarantee that such hedging techniques will be effective and there may be residual exposure of underlying positions remaining unhedged.

Risks associated with distribution out of / effectively out of capital

In respect of Distributing Shares, the Fund may at its discretion pay dividends out of the capital and/or effectively out of the capital of the Fund. Dividends paid out of the capital and/or effectively out of the capital amount to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Such dividends may result in an immediate decrease in the net asset value of the relevant shares. The distribution amount and net asset value of any hedged class may be adversely affected by differences in the interest rates of the reference currency of the hedged class and the Fund's base currency, resulting in an increase in the amount of distribution that is paid out of capital and hence a greater erosion of capital than unhedged classes.

Risks relating to downside protection strategy

While the Fund's investment objective and investment approach seeks to provide downside risk management and aims at managing losses or preserve the capital of the Fund, through the use of prudent security selection and the implementation of hedging and/or efficient portfolio management techniques through the utilisation of FDI, it may also preclude the Fund from fully capturing the upside in rising markets. The Fund may therefore underperform funds that do not adopt such a downside protection strategy in rising markets, due to the fact that the hedging strategies implemented will result in lower net exposure to the markets in which the Fund invests. While the Manager or the

PRODUCT KEY FACTS

Sub-Investment Managers may employ techniques and instruments to mitigate downside risk, there can be no guarantee that they will be successful in achieving the intended outcome under all circumstances and market conditions.

How has the Fund performed?

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested.
- These figures show by how much the USD A Monthly Distributing Class increased or decreased in value during the calendar year being shown. The USD A Monthly Distributing Class is the representative share class selected, being the share class available to the retail public in Hong Kong which is denominated in the Fund's base currency with the longest track record. Performance data has been calculated in USD including ongoing charges and excluding subscription fee and redemption fee you might have to pay.
- Where no past performance is shown there was insufficient data available in that year to provide performance.
- The benchmark of the Fund is Bloomberg U.S. Aggregate Index (Total Return, USD) (formerly known as Bloomberg Barclays U.S. Aggregate Index (Total Return, USD))
- Fund launch date: 2014
- USD A Monthly Distributing Class launch date: 2014

Is there any guarantee?

This Fund does not have any guarantees. You may not get back the full amount of money you invest.

What are the fees and charges?

Charges which may be payable by you

You may have to pay the following fees when dealing in the Shares of the Fund.

PRODUCT KEY FACTS

NEUBERGER	BERMAN
-----------	--------

Fee	What you pay
Subscription fee (Initial Sales Charge)	Up to 5% of the amount you buy [^]
Switching fee (Exchange Charge)	Up to 1% of the subscription amount [^]
Redemption fee	N/A [^]

[^] Additional fees and service charges in respect of subscriptions for, redemptions of and exchange of Shares may be payable by investors to intermediaries/distributors through whom they invest in such amount as they may agree with the relevant intermediary/distributor.

Ongoing fees payable by the Fund

The following expenses will be paid out of the Fund. They affect you because they reduce the return you get on your investments.

	Annual rate (as a % of the Fund's value)
	"A" Class Shares
Management fee	1.00%
Depository fee	no more than 0.02%
Performance fee	N/A
Administration fee	0.20%

Other fees

You may have to pay other fees when dealing in the Shares of the Fund.

Additional Information

- You generally buy and redeem Shares at the Fund's next-determined net asset value (NAV) after the Administrator receives your request in good order on or before 3.00 pm (Irish time) of the dealing day being the dealing cut-off time. The Hong Kong Representative/distributors may impose different dealing deadlines for receiving requests from investors.
- The net asset value of this Fund is calculated and the price of Shares published each "business day" on the following website: www.nb.com.
- Investors may obtain the past performance information of other share classes offered to Hong Kong investors from the Hong Kong Representative on request and at the following website: www.nb.com.
- The compositions of the dividends (i.e. the relative amounts paid from income and capital) for the last 12 months are available from the Hong Kong Representative on request and at the following website: www.nb.com. The Fund may amend the dividend policy subject to the SFC's prior approval and by giving not less than one month's notice to investors.
- Investors may obtain information on the intermediaries from the Fund's Hong Kong Representative, Neuberger Berman Asia Limited.
- The website mentioned in this document has not been reviewed by the SFC.
