What is this product?

This fund is constituted in the form of a mutual fund corporation. It is domiciled in Dublin, Ireland and its home regulator is the Central Bank of Ireland ("CBI").

Objectives and Investment Strategy

The investment objective of the Fund is to achieve an attractive level of total return (income plus capital appreciation) from global fixed income markets.

The Fund will invest primarily in investment grade debt securities issued by (i) governments and agencies from OECD countries; and (ii) corporations which have their head office or exercise an overriding part of their economic activity in OECD countries. All securities will be listed, dealt or traded on recognised markets without any particular focus on any one industrial sector. In addition to the Fund's exposure to currencies and interest rates inherent in its investments in debt securities, the Fund may also have significant exposures to currencies and interest rates through the use of financial derivative instruments.

The Fund may opportunistically invest up to 10% of its net asset value in participation interests in floating or adjustable rate senior secured loans, which are securitised and freely transferable, and which meet the regulatory criteria to be considered money market instruments.

Under normal market conditions, at least 90% of the Fund's net asset value is intended to be invested in investment grade fixed income securities. The Fund may, at its discretion, continue to hold or dispose of any investment which has subsequently been downgraded to below investment grade. The Fund may invest up to 10% of its net asset value in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade. The Fund's over or underweight exposure to securities issued by issuers from Emerging Market Countries (as defined in the Prospectus) relative to the benchmark (as specified in the "How has the Fund performed?" section below) will not exceed 10% of its net asset value.

The Fund may invest less than 30% of its net asset value in instruments with loss-absorption features (such as contingent convertible bonds and bail in bonds).

The Fund may invest up to 10% of its net asset value in underlying funds (including exchange traded funds which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes.

The Fund may use financial derivative instruments (FDI) (including swaps, credit default swaps, future contracts, options, swaptions and forward contracts) extensively for investment, efficient portfolio management and hedging purposes. For clarification, the maximum proportion of the Fund's net asset value that can be subject to total return swaps is 20%. The expected proportion of the Fund's net asset

PRODUCT KEY FACTS

NEUBERGER	BERMAN
-----------	--------

value that will be subject to total return swaps is 7%. The expected proportion is not a limit and the actual percentage may vary over time depending on factors including, but not limited to, market conditions.

No specific strategy relating to FDI is adopted by the Fund, however the Fund may use FDIs to achieve a profit or to hedge existing long positions, hedge against market risk or gain exposure to an underlying market and/or to hedge or gain exposure to an increase in the value of securities or currencies.

The Fund may utilise repurchase agreements and reverse repurchase agreements (“Repo Contracts”) in aggregate for up to 10% of its net asset value. For clarification, the expected proportion of the Fund’s net asset value that will be subject to Repo Contracts is 3%. The expected proportion is not a limit and the actual percentage may vary over time depending on factors including, but not limited to, market conditions.

The Fund is actively managed and does not intend to track the benchmark which is included in this document for performance comparison purposes and because the Fund’s investment policy restricts the extent to which the Fund’s holdings may deviate from the benchmark. This deviation may be significant.

Use of financial derivative instruments / investment in financial derivative instruments

The Fund’s net derivative exposure may be up to 50% of the Fund’s net asset value.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

Investment Risk

The Fund is an investment fund. The Fund’s investment portfolio may fall in value and therefore your investment in the Fund may suffer losses.

Fixed Income Securities and Downgrade Risk

Fixed income securities are subject to the risk of an issuer’s ability to meet principal and interest payments on the obligation (credit risk), and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). The Fund may invest in fixed-income securities which are interest rate sensitive. An increase in interest rates will generally reduce the value of fixed-income securities, while a decline in interest rates will generally increase the value of fixed-income securities. The performance of the Fund will therefore depend in part on the ability to anticipate and respond to such fluctuations on market interest rates, and to utilise appropriate strategies to maximise returns, while attempting to minimise the associated risks to investment capital. Fixed income securities are also exposed to the risk of being downgraded, which can cause a significant drop in the value of the Fund. The Manager or the Sub-Investment Managers may or may not be able to dispose of the debt instruments that are being downgraded.

Credit and Sovereign Debt Risk

The Fund may invest in government/sovereign and corporate fixed income securities. Investment in sovereign debts issued or guaranteed by governments as well as in corporate issues involves a high degree of risk, as default can occur if the government or corporate entity is not able or willing to repay the principal and/or interest when due.

Lower Rated Securities Risk

The Fund may invest in lower rated (i.e. high yield) or unrated debt securities. Such securities are more

likely to react to developments affecting market and credit risk than are more highly rated debt securities, which primarily react to movements in the general level of interest rates. Investors should carefully consider the relative risks of investing in high yield debt securities and understand that such securities generally are not meant for short-term investing.

The risk of loss due to default by these issuers is significantly greater because lower rated and unrated debt securities of comparable quality generally are unsecured and frequently are subordinated to the prior payment of senior indebtedness. Such securities are generally subject to lower liquidity, higher volatility and greater risk of loss of principal and interest than high-rated debt securities. The Fund may therefore find it more difficult to sell such high yield debt securities or may be able to sell these securities only at prices lower than if such securities were widely traded. Furthermore, the Fund may experience difficulty in valuing certain securities at certain times.

Credit Risk

The risk that issuers of fixed income securities may fail to meet their interest repayments, or repay debt, which may result the Fund suffering temporary or permanent losses. This risk is greater for investments with a lower credit rating.

Risks associated with Collateralised and/or Securitised Products

The Fund may invest in collateralised and/or securitised products, which may be less liquid than other debt securities, prone to substantial price volatility, and subject to greater credit, liquidity and interest rate risk compared to other debt securities. They are often exposed to extension and prepayment risks and risks that the payment obligations relating to the underlying assets are not met, which may adversely impact the return of the securities.

Eurozone Risk

In light of ongoing concerns on the sovereign debt risk of certain Member States within the Eurozone, the Fund's investments in the Euro region may be subject to higher volatility, liquidity, currency and default risks. Any adverse events, such as credit downgrade or a sovereign or exit of EU Member States from the Eurozone, may have a negative impact on the value of the Fund.

There is a possibility that the economic and financial challenges faced by countries in the Eurozone may continue to worsen or spread across Europe, or even outside Europe. In such circumstances, countries may look to leave the Eurozone, or may end up in default. Although governments of European countries, central banks and other regulatory authorities may have taken various initiatives to mitigate the economic and financial problems, such as austerity measures and reforms, there is no guarantee that such measures will deliver desirable results. The impact of the issues described above may be significant and may have an adverse impact on the value of the Fund (such as increased volatility, liquidity and currency risk associated with investments in Europe).

Currency Risk

The Base Currency value of the investment of the Fund designated in another currency may rise and fall due to exchange rate fluctuations in respect of the relevant currencies. Adverse movements in currency exchange rates can result in a decrease in return of and a loss of capital.

Currency Hedging Risk

While potentially reducing the currency risks to which the Fund would otherwise be exposed, currency hedging instruments may involve the risk of a default by a counterparty (counterparty risk).

Forward Contracts Risk

Forward contracts may experience periods of illiquidity, sometimes for a significant duration. This may lead to substantial losses to the Fund.

Risks relating to the use of FDI

Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk

PRODUCT KEY FACTS

NEUBERGER	BERMAN
-----------	--------

and over-the-counter transaction risk. The leverage element/component of an FDI can result in a loss significantly greater than the amount invested in the FDI by the Fund. Exposure to FDI may lead to a high risk of significant loss by the Fund.

FDI may be used for hedging purposes. Hedging is a technique used to seek to minimise an exposure created from an underlying position by counteracting such exposure by means of acquiring an offsetting position. The use of hedging techniques may limit the potential upside of the Fund. There is no guarantee that such hedging techniques will be effective and there may be residual exposure of underlying positions remaining unhedged.

Risks associated with distribution out of / effectively out of capital

In respect of Distributing Shares, the Fund may at its discretion pay dividends out of the capital and/or effectively out of the capital of the Fund. Dividends paid out of the capital and/or effectively out of the capital amount to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Such dividends may result in an immediate decrease in the net asset value of the relevant shares. The distribution amount and net asset value of any hedged class may be adversely affected by differences in the interest rates of the reference currency of the hedged class and the Fund's base currency, resulting in an increase in the amount of distribution that is paid out of capital and hence a greater erosion of capital than unhedged classes.

PRODUCT KEY FACTS

NEUBERGER	BERMAN
-----------	--------

How has the Fund performed?

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested.
- These figures show by how much the USD A Accumulating Class increased or decreased in value during the calendar year being shown. The USD A Accumulating Class is the representative share class selected, being the share class available to the retail public in Hong Kong with the longest track record. Performance data has been calculated in USD including ongoing charges and excluding subscription fee and redemption fee you might have to pay.
- Where no past performance is shown there was insufficient data available in that year to provide performance. No performance data is provided for 2021 as the USD A Accumulating Class has become inactive during this year.
- The benchmark of the Fund is Bloomberg Global Aggregate Index (Total Return, Unhedged, USD) (formerly known as Bloomberg Barclays Global Aggregate Index (Total Return, Unhedged, USD))
- Fund launch date: 2012
- USD A Accumulating Class launch date: 2016

Is there any guarantee?

This Fund does not have any guarantees. You may not get back the full amount of money you invest.

-----------	--------

What are the fees and charges?

Charges which may be payable by you

You may have to pay the following fees when dealing in the Shares of the Fund.

Fee	What you pay
Subscription fee (Initial Sales Charge)	Up to 5% of the amount you buy [^]
Switching fee (Exchange Charge)	Up to 1% of the subscription amount [^]
Redemption fee	N/A [^]

[^] Additional fees and service charges in respect of subscriptions for, redemptions of and exchange of Shares may be payable by investors to intermediaries/distributors through whom they invest in such amount as they may agree with the relevant intermediary/distributor.

Ongoing fees payable by the Fund

The following expenses will be paid out of the Fund. They affect you because they reduce the return you get on your investments.

	Annual rate (as a % of the Fund's value)
	"A" Class Shares
Management fee	0.40%
Depositary fee	no more than 0.02%
Performance fee	N/A
Administration fee	0.20%

Other fees

You may have to pay other fees when dealing in the Shares of the Fund.

Additional Information

- You generally buy and redeem Shares at the Fund's next-determined net asset value (NAV) after the Administrator receives your request in good order on or before 3.00 pm (Irish time) of the dealing day being the dealing cut-off time. The Hong Kong Representative/distributors may impose different dealing deadlines for receiving requests from investors.
- The net asset value of this Fund is calculated and the price of Shares published each "business day" at the following address: www.nb.com.
- Investors may obtain the past performance information of other share classes offered to Hong Kong investors from the Hong Kong Representative on request and at the following address: www.nb.com.
- The compositions of the dividends (i.e. the relative amounts paid from income and capital) for the last 12 months are available from the Hong Kong representative on request and at the following address: www.nb.com. The Fund may amend the dividend policy subject to the SFC's prior approval and by giving not less than one month's notice to investors.
- Investors may obtain information on the intermediaries from the Fund's Hong Kong Representative,
