\*The ongoing charges figures are calculated based on the costs incurred by the Sub-Fund over a 12-month period divided by the average net assets over the same period based on the information in the latest audited financial statement for the year ended 30 September 2021. It is provided for each share class available within the Sub-Fund. This figure may vary from year to year. It includes All-in-Fee plus the Luxembourg tax (Taxe d’Abonnement) and excludes transaction cost. Rounding differences may occur.

### What is this product?

The Sub-Fund is a sub-fund of Allianz Global Investors Fund (the “Company”), which is constituted as an open ended investment company in Luxembourg. It is regulated by Commission de Surveillance du Secteur Financier (“CSSF”) in Luxembourg.

### Investment Objective

Long-term capital growth and income by investing in the US equity markets.

### Investment Strategy

At least 70% of Sub-Fund assets are invested in equities of companies which are exposed or connected to the US markets (eg. companies with sales/profits predominantly in those markets). Less than 30% of Sub-Fund assets may be invested in equities other than the above.

Up to 30% of Sub-Fund assets may be invested in emerging markets.

Up to 20% of Sub-Fund assets may be held in time deposits and/or deposits at sight and/or invested directly in money market instruments and/or (up to 10% of Sub-Fund assets) in money market funds.

Up to 10% of Sub-Fund assets may be invested in instruments with loss-absorption features (i.e. contingent convertible bonds). These bonds may be subject to contingent write-down or contingent conversion to ordinary shares on the occurrence of trigger events.

## Use of derivatives/investment in derivatives

The Sub-Fund's net derivative exposure may be up to 50% of the Sub-Fund's net asset value.

## What are the key risks?

**Investment involves risks. The Sub-Fund's investment portfolio may fall in value due to any of the key risk factors below and therefore your investment in the Sub-Fund may suffer losses. Please refer to the Prospectus for details including the risk factors.**

### 1. Investment Risk/General Market Risk

- The Sub-Fund is an investment fund. There is no guarantee of the repayment of principal. The instruments invested by the Sub-Fund may fall in value.
- The Sub-Fund invests in securities (eg. equities), and is exposed to various general trends and tendencies in the economic and political situations as well as securities markets and investment sentiment, which are partially attributable to irrational factors. Such factors could lead to substantial and longer-lasting drops in prices affecting the entire market. Securities from top-rated issuers are subject to essentially the same general market risk as other securities and assets. All these factors may adversely impact the net asset value of the Sub-Fund.

### 2. Company-specific Risk

- The assets of the Sub-Fund may invest in equities which may be affected by company-specific factors, such as the issuer's business situation. If a company-specific factor deteriorates, the price of the respective asset may drop significantly and for an extended period of time, possibly even without regard to an otherwise generally positive market trend. All these factors may adversely impact the net asset value of the Sub-Fund.

### 3. Country and Region Risk

- The Sub-Fund's investments focus on the US, which may increase the concentration risk. Consequently, the Sub-Fund is particularly susceptible to the adverse economic, political, policy, foreign exchange, liquidity, tax, legal or regulatory events and risks of this region, or of companies based and/or operating in this region. The net asset value of the Sub-Fund may be more volatile than a diversified fund.

### 4. Emerging Market Risk

- The Sub-Fund invests in emerging markets which involve increased risks and special considerations not typically associated with investment in more developed economies or markets, such as greater political, tax, legal, economic, foreign exchange/control, liquidity, regulatory risks, settlement risks, custody risk and the likelihood of a high degree of volatility. The accounting, auditing and financial reporting standards may deviate substantially to the Sub-Fund's detriment. All these factors may adversely impact the net asset value of the Sub-Fund.

### 5. Risk associated with small-capitalisation/mid-capitalisation companies

- The Sub-Fund may invest in the stock of small-capitalisation/mid-capitalisation companies may have lower liquidity and their prices are more volatile to adverse economic developments than those of larger capitalisation companies in general.

### 6. Currency Risk

- If a Sub-Fund holds assets denominated in foreign currencies other than the base currency of the Sub-Fund or if a class of shares may be designated in a currency other than the base currency of the Sub-Fund, it is exposed to a currency risk if foreign currency positions have not been hedged or if there is any change in the relevant exchange control regulations. Any devaluation of the foreign currency against the base currency of the Sub-Fund would cause the value of the assets denominated in the foreign currency to fall.

## 7. RMB Risk

- The Sub-Fund may launch share classes denominated in offshore Chinese Renminbi. The Chinese Renminbi traded in Mainland China is not freely convertible and is subject to exchange controls, policies and restrictions imposed by the PRC authorities. Such policies may limit the depth of the Chinese Renminbi market available outside of Mainland China, and thereby may reduce the liquidity of the Sub-Fund. Under exceptional circumstances, payment of redemptions and/or dividend payment in RMB may be delayed due to the exchange controls and restrictions applicable to RMB. Furthermore although offshore Renminbi and onshore Renminbi are the same currency, they trade at different rates. Any divergence between offshore Renminbi and onshore Renminbi may adversely impact investors.
- Any depreciation of RMB could adversely affect the value of investors' investment in the RMB denominated share classes.

## 8. Derivatives Risk

- The Sub-Fund may invest in derivatives, which may expose the Sub-Fund to higher leverage, counterparty, liquidity, valuation, volatility, market and over the counter transaction risks, all of which may adversely impact the net asset value of the Sub-Fund. The leverage component of financial derivative instruments ("FDI") can result in a loss significantly greater than the amount invested in the FDI by the Sub-Fund.
- The Sub-Fund's use of FDI in efficient portfolio management (including for hedging) may become ineffective and/or cause the Sub-Fund to suffer significant losses.

## 9. Risk related to Distribution out of Capital and Distribution effectively out of Capital

- The payment of distributions out of capital/distributions effectively out of capital represents a return or withdrawal of part of the amount investors originally invested in and/or capital gains attributable to the original investment. Any distributions involving payment of distributions out of the Sub-Fund's capital/distributions effectively out of the Sub-Fund's capital may result in an immediate decrease in the net asset value per share and may reduce the capital available for the Sub-Fund for future investment and capital growth.
- The distribution amount and net asset value of any hedged share classes of the Sub-Fund may be adversely affected by differences in the interest rates of the reference currency of the hedged share classes and the base currency of the Sub-Fund, resulting in an increase in the amount of distribution that is paid out of capital and hence a greater erosion of capital than other non-hedged share classes.
